

IN THE CLAIMS

The following claims will replace all prior versions of the claims in this application.

1. (Currently amended) A stable composition for rapid delivery by inhalation to the lungs, and subsequently to the bloodstream, and composition comprising a therapeutically effective amount of delta-9-tetrahydrocannabinol in a pharmaceutically-acceptable semiaqueous solvent comprising an alcohol, water and a glycol, in amounts sufficient.
 - (i) to aerosolize the composition to a mean mass median aerodynamic diameter in the range of from about 1 up to about 10 μ M;
 - (ii) to enhance partitioning by producing a stable clear solution near the solubility point of the delta-9-tetrahydrocannabinol, ~~and~~
 - (iii) wherein after the administration of a single dose of the stable composition, a Tmax for delta-9-tetrahydrocannabinol is achieved at least within between about 0.032 hour to about 0.041 hour[.];and
 - (iv) wherein after the administration of the single dose of the stable composition a Tmax for 11-OH-delta-9 tetrahydrocannabinol is achieved between about 0.115 hour to about 0.208 hour.
2. (Previously presented) A composition as defined in Claim 1 wherein said delta-9-tetrahydrocannabinol comprises from about 0.1 to about 200 mg/mL of the stable composition.
3. (Previously presented) A composition as defined in Claim 2 wherein said delta-9-tetrahydrocannabinol comprises from 0.1 to 25 mg/mL of the stable composition.
4. (Previously presented) A composition as defined in Claim 2 wherein said delta-9-tetrahydrocannabinol comprises 50 mg/mL of the stable composition.

5. (Original) A composition as defined in Claim 1 wherein said solvent comprises ethanol, water and propylene glycol.
6. (Original) A composition as defined in Claim 5 wherein the volumetric ratios of ethanol : water : propylene glycol are selected from those in the range of from 10-70 : 10-30 : 20-80, respectively, having a combined total of 100.
7. (Original) A composition as defined in Claim 5 wherein the volumetric ratios of ethanol : water : propylene glycol are selected from those in the range of from 10-70 : 10 : 20-80, respectively, having a combined total of 100.
8. (Original) A composition as defined in Claim 7 wherein the volumetric ratios of ethanol : water : propylene glycol are 35 : 10 : 55, respectively, having a combined total of 100.
9. (Original) A sterile and/or preserved sealed unit-or-multi-unit dosage form of delta-9-tetrahydrocannabinol comprising a container and a stable composition for rapid delivery by inhalation to the lungs and subsequently to the bloodstream, as defined in Claim 1.
10. (Previously presented) A sterile and/or preserved sealed unit-or-multi-unit dosage form as defined in Claim 9 wherein said container comprises Type I Amber Glass with a liner.
